

Stanley Lageweg

I'm a senior game programmer, specializing in player-facing interactive systems. I love collaborating in varied teams, to create something greater than the sum of its parts. Challenging work is what keeps me motivated, whether it's creating clean code architectures, solving complex 3D math problems or iterating on a feature to get the feel just right.

 **Address:** Alphen a/d Rijn, Netherlands

 **Languages:** Dutch (native), English (fluent)

Work Experience

Senior Game Programmer

Jan. 2024 - July 2026

Vertigo Games, Amsterdam

- Polished, optimized and shipped an award winning AAA VR game.
- Led the development of one of the three gameplay pillars.
- Owned the technical direction and implementation of a large-scale player locomotion system.
- Mentored a game programming intern.

Game Programmer

Sept. 2022 - Dec. 2023

Vertigo Games, Amsterdam

- Contributed to nearly every player-facing gameplay mechanic for a AAA VR game.
- Independently planned, estimated and delivered gameplay features.
- Iterated on gameplay feel to deliver tactile, accessible VR interactions.
- Mentored a junior game programmer.

Game Programmer

Sept. 2020 - Aug. 2022

KeokeN Interactive, Hoofddorp

- Owned the development of multiple player-facing gameplay systems.
- Collaborated with (sound) designers and animators to iterate on gameplay mechanics.
- Contributed to the successful launch of a multi-platform title.

Skills

Programming Languages

C++, C#, TypeScript, JavaScript, HTML, CSS, Java, Python, Ruby

Competencies

Gameplay Programming, Character Controllers (3Cs), Technical Game Design, 3D Math, Physics Simulation, Performance Optimization, Technical Animation, Automated Testing, Navigation Systems

Game Engines & Development Tools

Unreal Engine 4 & 5, Unity, Meta Horizon Studio, Perforce, Git, Jira

Platforms

PC, PCVR, Playstation 4 & 5, Playstation VR2, XBOX One, XBOX Series X|S, Meta Quest 2 & 3

Selected Projects

Unannounced AAA Action-adventure Game

Nov. 2024 - Jan. 2026

Vertigo Games - Unreal Engine 5, C++

I owned one of the three gameplay pillars: Unbound Athlete. I proposed to replace the existing NavMesh-based locomotion system with a collision-based solution. After presenting and defending my design to the technical director and senior engineering leadership, I led the implementation of this large-scale locomotion system from concept to completion. I also guided an intermediate programmer in integrating the new locomotion system with our existing Test Automation Framework.

Metro Awakening

Sept. 2022 - Dec. 2024

Vertigo Games - Unreal Engine 5, C++ - Shipped on: PCVR, Quest 2, Quest 3 and PSVR2

For this VR prequel to the AAA Metro franchise, I worked on nearly every player-facing gameplay mechanic, from locomotion and firearms to hand movement, animations and interactions. My work focussed on creating tactile, mechanical and accessible interactions, while meeting the performance requirements to run natively on Quest 2. The game went on to win the **Steam VR Game of the Year** award, and was nominated for **Best VR/AR Game** at The Game Awards.

Deliver Us Mars

Sept. 2020 - Aug. 2022

KeokeN Interactive - Unreal Engine 4, C++ - Shipped on: PC, PS4, PS5, XBOX One and XBOX Series X|S

I was responsible for designing and implementing a dynamic climbing system, using procedural animation to enable full movement freedom. I also developed an advanced third person camera system, ensuring smooth movement for a cinematic experience. In addition, I implemented a wide range of mechanics and systems, such as the interaction prompts system, the item inspection system, airlock doors, elevators, mantling and the ASE decryption puzzle mechanic.

Education

BSc Computer Science and Engineering

Sept. 2017 - July 2020

Delft University of Technology

Graduated Cum Laude

Minor Game Studies and Cultural Analysis

Sept. 2019 - June 2020

Leiden University

Additional Projects

Unannounced Mobile Game

Feb. 2026 - May. 2026

Vertigo Games - Meta Horizon Studio, TypeScript

I was brought onto the project later in development, to provide additional technical expertise and to strengthen the project's technical foundation. I also implemented several core game systems, including the game's saving and loading functionality.

Unannounced VR to Flatscreen Port

Jan. 2026 - Feb. 2026

Vertigo Games - Unreal Engine 5, C++

I was responsible for adapting the game's locomotion, interactions, equipment and inventory system from VR to a traditional flatscreen experience. This included designing the technical architecture and working closely with designers to translate VR gameplay into mouse and controller input.
